

# Virtual AUTO Mechanic Premium

## Introduction

Virtual AUTO Mechanic Premium is an automotive training and teaching assistance product. The software simulates car disassembly and assembly and teaches related principles through VR, allowing students to **disassemble and assemble the engine, transmission, suspension simulation, brake, air distribution box, and air-conditioning compressor.**

The software refers to **an actual car for 1:1 modeling** to ensure the simulation effect, so that the vehicle powertrain and related structures can be clearly displayed in front of the students. Students can complete the whole simulated training course through virtual scenarios, which not only improves students' interest in learning, but also reduces the school's training consumables.

## Composition

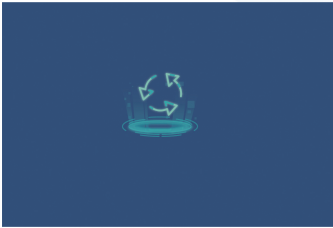

3 main modules: disassembly training, installation training and principle display, covering the major parts including engine, transmission, suspension, brake, air distribution box, air-conditioning compressor steering system etc.

## Highlights

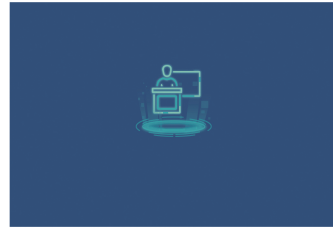

It is suitable for the world's leading desktop VR equipment, Zspace all-in-one machine and PC computer, with a smooth operating experience and clear display effect.

The practical training is divided into a guiding mode suitable for classroom teaching, a practical training mode suitable for self-practice and an assessment mode suitable for understanding and proficiency.

The car model is used for 1:1 modeling and production, and the operation steps are simulated in strict accordance with the standardized process and the manufacturer's maintenance manual process.

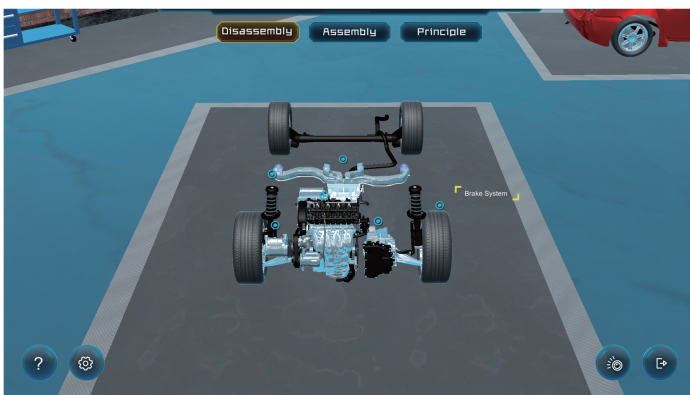

The product disassembly and assembly content are complete with functions such as theory, practical training, assessment, etc., to facilitate "pre-training".

## Samples

It reproduces the actual assembly and disassembly operation, saving high costs of consumption and avoiding high risks.

You can rotate or move any part in this software freely and zoom in or out to observe in greater detail.
